SUMMARY

BS Computer Science student with hands-on experience in UI/UX design and front-end web development, including user research, personas, wireframing, low-fidelity and high-fidelity prototyping, responsive design, and web accessibility (WCAG). Built user-facing products with React, Next.js, HTML5, CSS3, and JavaScript during a web development internship at SafeX Solutions, and designed a human-centered wearable AI interface in an HCI course. Seeking to contribute to GDGoC's Technical Projects Team (UI/UX) by designing intuitive, accessible, user-centered interfaces and collaborating with developers to ship them.

EDUCATION

National University of Computing and Emerging Sciences (FAST-NUCES), Islamabad, Pakistan 2024 – 2028

BS Computer Science

Relevant Coursework: Human-Computer Interaction, Software Design and Analysis, Artificial Intelligence, Data Structures & Algorithms, Object-Oriented Programming, Probability & Statistics

SKILLS

UI/UX Design: User Research, User Interviews, Personas, Wireframing, Prototyping (Low-Fidelity and High-Fidelity), Figma, Usability Testing, User Flows, Information Architecture, Interaction Design, Visual Design, Design Thinking

Accessibility: WCAG, Color Contrast, Semantic HTML, Heading Hierarchy, Accessible Naming, Lighthouse, axe DevTools

Front-End Development: HTML5, CSS3, JavaScript, React, Next.js, Responsive Web Design, Mobile-First Design, Dark/Light Theming, CSS Animations, FullCalendar

Back-End and Databases: ASP.NET Core MVC, Node.js, Firebase, SQL Server, Entity Framework Core, REST APIs, JWT Authentication

Software Design and Analysis: Requirements Analysis, Functional Requirements, Object-Oriented Design, Software Design, System Modeling

Programming Languages: Python, C++, Java, JavaScript

AI/ML and Data: TensorFlow, PyTorch, Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib

Tools: Git, GitHub, Figma, Lighthouse, axe DevTools, JavaFX, Pygame, SFML

Core Competencies: Technical Communication, Cross-Functional Collaboration, Teamwork, Problem Solving

EXPERIENCE

Web Development Intern

- Designed and built a responsive personal portfolio website using HTML5, CSS3, and JavaScript, featuring a dark/light theme toggle, scroll-reveal animations, and a filterable project grid.
- Developed the Course Management Module for SafeX's Digital Skills Platform using React and Next.js, with CRUD workflows for courses, modules, and lessons including content upload.
- Built the Job Posting Module for an internship freelancing platform using ASP.NET Core MVC, Entity Framework Core, and SQL Server, including a job creation form with validation, public listing and detail pages, and an admin approval workflow.
- Conducted a web accessibility audit using Lighthouse and axe DevTools, then fixed color contrast, heading order, and accessible naming for icon-only links to improve WCAG compliance.
- Built "Bella Vita," a SaaS-style salon booking system with React, Node.js, and Firebase, featuring customer-facing pages (Home, Services, Book) and an admin panel (Dashboard, Calendar, Bookings, Services, Staff) with a color-coded FullCalendar view.
- Implemented JWT authentication, prevented double-booking using locked database transactions, and designed per-stylist working-hours scheduling.
- Packaged the booking system as a sellable service and ran a client outreach sprint targeting businesses in the UAE and Pakistan.

PROJECTS

Wearable AI Interface: Hajj & Umrah AR Glasses Guidance System Team Project

- Designed a hands-free AR glasses interface to help pilgrims with tawaf counting, navigation, family meet-up points, and qibla and prayer reminders.

- Conducted user interviews with 3 participants, synthesized 8 findings into a user persona, and defined 21 functional requirements.
- Created a low-fidelity storyboard prototype of 20+ screens and states covering core flows, error states, and no-touch interaction (side click and voice); currently building a high-fidelity Figma prototype for usability testing.

CityMind: AI-Powered Smart City Management System Team Project

- Designed a constraint-aware city layout planning module using a hybrid placement and constraint-repair approach.
- Built an ambulance placement optimization system using Genetic Algorithms and Local Beam Search to maximize emergency coverage and minimize response times, in a multi-module simulation built with Python and Pygame.

Inceria: Incident Reporting & Emergency Dispatch System Team Project

- Developed core business logic in Java for incident assignment, status tracking, and dispute handling within a layered JavaFX architecture, applying OOP principles.

CGPA Prediction Model Team Project

- Cleaned and preprocessed a 2,392-record Kaggle student dataset and performed correlation analysis, outlier detection, and data visualization using Pandas, Seaborn, and Matplotlib, supporting a regression model that achieved 95.14% R^2.

CERTIFICATIONS

- Responsive Web Design Certification, freeCodeCamp: built 5 responsive web projects (tribute page, product landing page, personal portfolio) using HTML5 and CSS3.
- AI Bootcamp on Image Recognition, Devtown: built an MNIST digit classification model (70,000 images, 10 classes) using TensorFlow and PyTorch.

VOLUNTEERING

- Pakistan Bureau of Statistics Datafest: administered survey forms to 20+ workshop attendees across a 2-day census event.
