Alishbah Asif

Wah Cantt, Pakistan · alishbahasif6@gmail.com · 0332-5331872 · linkedin.com/in/alishbah-asif-489766326 · https://github.com/alishbah-asif

Summary

BS Computer Science student with applied experience in C++, Python (Pandas, NumPy, Scikit-learn, Seaborn), and Java, including a TensorFlow/PyTorch image classification model trained on MNIST and team-based projects spanning AI simulation, regression modeling, and software system design. Comfortable building software end-to-end — from CLI/desktop applications to web interfaces — with growing focus on applied AI/ML systems. Seeking to contribute to NASTP's AI/ML initiatives through hands-on technical execution and rapid learning.

Education

National University of Computing and Emerging Sciences *Islamabad, Pakistan*

BS Computer Science *2024 – 2028*

· Relevant Coursework: Artificial Intelligence, Data Structures & Algorithms, Probability & Statistics, Object-Oriented Programming

Projects

CityMind – AI-Powered Smart City Management System *Team Project*

- Designed and implemented a constraint-aware city layout planning module using a hybrid placement and constraint-repair approach, and developed an ambulance placement optimization system using Genetic Algorithms and Local Beam Search to maximize emergency coverage and minimize response times within a multi-module AI smart-city simulation built in Python and Pygame.

Inceria – Incident Reporting & Emergency Dispatch System *Team Project*

- Developed core business logic in Java for incident assignment, status tracking, and dispute handling, implementing OOP-based modules within a layered JavaFX architecture for a centralized emergency-dispatch platform.

CGPA Prediction Model *Team Project*

- Cleaned and preprocessed a 2,392-record Kaggle student dataset and conducted statistical analysis (correlation, outlier detection) and visualization using Pandas, Seaborn, and Matplotlib — supporting a team-built regression model that achieved 95.14% R^2 in predicting student CGPA.

Skills

Programming Languages: C++, Python (Intermediate), Java (Intermediate — OOP principles)

AI/ML & Data: TensorFlow, PyTorch, Pandas, NumPy, Scikit-learn, Seaborn, Machine Learning, Deep Learning, Data Analysis, supervised learning fundamentals, image classification

Software Development: Object-Oriented Programming, Data Structures & Algorithms, File Handling, Graph-based Applications, Desktop Application Development (C++, SFML)

Web Development: HTML5, CSS3, Responsive Web Design

Core Competencies: Technical Communication, Cross-functional Collaboration, Problem Solving

Certifications

- Built a digit classification model using TensorFlow and PyTorch, trained on the MNIST dataset (70,000 images, 10 classes) — developed during Devtown's 5-day AI bootcamp on image recognition systems.
- Built 5 responsive web projects — including a tribute page, product landing page, and personal portfolio — using HTML5 and CSS3 to earn FreeCodeCamp's Responsive Web Design certification.

Volunteering

- Administered paper-based survey forms to 20+ workshop attendees at Pakistan Bureau of Statistics Datafest, supporting national data collection efforts across a 2-day census event.
